License Model File Rental

Licensing models for delivering standard content as SCORM packages or Tin Can (xAPI) for seamless integration with your LMS.

We offer you our standard content for integration into your own learning management system. We provide the files of the e-training courses as SCORM packages (SCORM 1.2 or SCORM 2004) or Tin Can (xAPI).

Description of Macrolearnings

PINKTUM offers a broad selection of standard content designed to improve general skills.

For the current range of e-trainings, please refer to the product overview or our catalog, which is available for download on our website.

The e-training courses feature video-based, multimedia, and interactive learning mediums, supported by relevant supplementary materials, to foster sustainable learning success. These courses comprise 2 to 7-minute learning segments meticulously designed as part of a 45 to 60-minute didactic program.

The e-training courses foster sustainable, self-directed learning experiences. Furthermore, classroom training can be replaced with high-quality blended learning scenarios.

Description of Microlearnings

PINKTUM offers a broad selection of microlearning content designed to improve general skills.

Microlearnings are video-based learning resources to ensure sustainable learning success. They consist of 2 to 4-minute learning units that refresh knowledge and sharpen skills in the "Know-How" and "Challenge" formats. The short learning units are based on traditional e-learning, the macrolearnings, and provide targeted knowledge in just a few minutes. Microlearnings, just like macrolearnings, can also be used independently as stand-alone training.

For the current range of e-trainings, please refer to the product overview or our catalog, which is available for download on our website.

Description of Microsoft Office courses

"Know-How!" offers a wide range of Microsoft content to develop your specialist skills in a targeted manner. You can find an overview of all currently available Microsoft courses in the corresponding product overview. The Microsoft e-training courses are multimedia-based, video-based and interactive learning opportunities that support sustainable learning success with supplementary materials. The content is organized in clearly structured learning units and didactically designed. These e-training courses promote self-directed learning and ensure that knowledge is anchored in the long term. At the same time, they can replace face-to-face training and optimally complement high-quality blended learning formats.

Description of Mandatory Training Courses

complies offers a basic portfolio of mandatory training courses, hereinafter referred to as compliyes e-trainings, for the verifiable and efficient fulfillment of a company's compliance obligations (e.g., data protection or occupational health and safety).

The compliyes e-trainings are video-based, multimedia, interactive learning materials with appropriate accompanying resources to ensure sustainable learning success. These courses comprise 5 to 7-minute learning segments meticulously designed as part of a 30 to 40-minute didactic program.

The compliyes e-training courses guarantee sustainable, self-organized learning with a high degree of interaction. A substantial portion of the previously mandatory training requirements may be economically substituted through this method.
